

Evgeniy Mnatsakanov

Full-stack JavaScript Developer

Middle+ developer with 4+ years of experience, able to build a Web presence from the ground up – from concept, navigation, layout and programming to UX and SEO. Skilled at writing well-designed, testable and efficient code using current best practices in development.

TECHNICAL TOOLBOX AND SKILLS

 Front-End	<p>I specialise in applications written in Vue.JS. My current experience and skills in front-end include:</p> <ul style="list-style-type: none">✓ Proficiency with JavaScript and HTML5✓ Deep knowledge of commonly used modules based on extensive work experience✓ Creating self-contained and reusable modules and components✓ Ensuring a clear dependency chain, in regard to the app logic as well as the file system✓ Ability to provide SEO solutions for single page apps✓ Full integration of front-end development using tools like Webpack with features like automatic code reload, code minifications, multiple development environments support
 Back-End	<p>Nearly every app I have done in the past had the back-end written also by me. In order to improve the development speed, performance and reliability, I have changed language from PHP to JavaScript. My current experience and skills in back-end include:</p> <ul style="list-style-type: none">✓ Strong proficiency with ES8 and below✓ Knowledge of Node.js, MongoDB, request, socket.io, Express/Restify framework and many others✓ Understanding the nature of asynchronous programming and its quirks and workarounds✓ Understanding accessibility and security compliance✓ User authentication and authorization between multiple systems, servers, and environments✓ Integration of multiple data sources and databases into one system✓ Writing native addons using Native Abstractions for Node.js (NAN)

WORK EXPERIENCE

■ 2019 – Present Days

[x2Roulette](#) – I've developed and published game in Steam. I use Electron with Steam API integration through Native Abstractions for Node.js on the client side and AWS Lambda on the server side.

■ 2014-2018

[SteamBot](#) – trading platform, where Steam users can trade, buy or sell in-game items from Counter-Strike: Global Offensive or buy games with discount. The first version of the site was written in PHP + Bootstrap, and then rewritten in Node.js + Angular.js. Now the site is inactive (updated items trading rules and competition have made the site unprofitable)

I also have dozens of small projects with integration of third-party APIs written for personal use. Feel free to ask me about this, maybe I already have a ready-made solution for you.
